ReddShell releases ReddSECURE® Version 3.8

Centennial, Colorado, June 1, 2005 – ReddShell Corporation today announced a major new release of its ReddSECURE® product line. ReddSECURE Version 3.8 includes a number of significant feature enhancements and the integration of a new scanning technology from SAINT Corporation of Bethesda, Maryland.

“Using SAINT® as our embedded network scanner offers a number of significant advantages over our previous versions,” according to Troy Schumaker, CISSP, ReddShell’s Chief Technology and Security Officer. “The SAINT® scanning technologies deliver a CVE® Compatible, commercial-grade product with all that implies concerning support, quality, and completeness of a scanning solution.”

ReddSECURE Version 3.8 major feature enhancements highlights include the:

- Integration of the SAINT® scanning engine on an OEM basis
- Ability to view and report on historical scan data by “Named Scan” within “Security Domains”
- Ability to import the results of other widely-used network, database and application scanners

“SAINT Corporation sees great potential in our strategic partnership with ReddShell,” said Billy Austin, SAINT’s Chief Security Officer. “Their intimate knowledge of the needs of security practitioners is directly reflected in their product’s strategic direction. That vision is highly complementary to ours, and we expect a long and mutually beneficial relationship.”

“We’re very excited about our relationship with SAINT®, and we’re just as excited about the continued progress we’re making in all aspects of our product strategy,” said Rick Byrne, ReddShell’s President & CEO. “Not only do we deliver a top-of-the-line scanning product, but we protect our customers’ existing investment in other scanning technologies. Allowing customers to import results from other products puts them in the enviable position of choosing best-of-breed technologies and allowing them to view, compare and track results in a single application. We listen carefully to our customers, and this allows ReddSECURE to be positioned at the very heart of their IT security infrastructure.”

About ReddShell

ReddShell Corporation, an industry leader in security and compliance products and services and offers a comprehensive array of professional services and security tools to help organizations proactively manage their critical IT assets and assist in regulatory compliance.
